Art Unit: 2622

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

2. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 5-10 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement.

Art Unit: 2622

The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

With regard to claim 5, claim 5 recites "a delay section comprising a series of buffer memories that are serially connected for storing N pixels of image data, the delay section receiving input of image data read out by the readout section to one end of the series of buffer memories and outputting delayed image data from each of the buffer memories; and a section for conducting signal processing of image data in the horizontal or vertical direction by weighting and compositing the image data outputted from each of the buffer memories."; where the limitation is not disclosed in the specification. It should be noted that delay circuits 81, 82 or 83 (elements 72 and 73) stores a pixel and processes horizontal lines; the circuits are serially connected to buffer memory 91, 92 or 93 (elements 74 and 75) stores one line of pixels (col. 9, lines 41-50 and col. 10, lines 10-15). In order to process image data in horizontal or vertical, the delay section must include elements 72, 73, 74 and 75.

With regard to claim 9, claim 9 recites what was discussed with respect to claim 5.
